

DISPLAY DEVICE WITH PIVOTABLE BASE

5

ABSTRACT OF THE DISCLOSURE

A display device includes a display part, and a base
part supporting the display part. The base part is
10 composed of a tilt unit for mounting the display part
rotatably about a horizontal axis, a tilt base for
directly or indirectly supporting the tilt unit, and a
receiving plate disposed in the facing relationship with
the tilt base. A guide part is provided on one of the
15 tilt base and the receiving plate, for guiding the tilt
base and the receiving plate for relative rotation about
a vertical axis. Ball-shaped or mushroom shaped low
friction members are disposed between the tilt base and
the receiving plate. The display part can be thus
20 rotated about the horizontal and vertical axes.
